

SiteScan Quick-Start Guide

From capture to compliance in five steps

SiteScan turns any phone into an AI inspector. Follow these five steps to move from site photos to a cited, downloadable report — usually in under two minutes.

01 Choose your scan

Pick EHS Safety, Nature-Based Solutions, or a dual video walkthrough. Each mode is built for a different site question — compliance, biodiversity, or both.

02 Capture your site

Upload 1–5 photos or record a 5-minute video walkthrough. Add quick context notes so the AI understands what it is looking at.

03 Set your country

Select your country or region to get localized standards — OSHA, HSE, EU Directives, CCOHS, WHS, WorkSafe NZ, or the ILO baseline.

04 Get instant analysis

AI returns findings in about 30 seconds. Every risk or opportunity is cited against real standards, not generic checklists.

SiteScan Quick-Start Guide

Steps 4–5 and what you get

05 Download & act

Open your branded PDF report, review the prioritized remediation plan, and click through to recommended equipment when relevant.

What is inside every report

- Prioritized findings with severity, each cited to a real standard
- Country-aware regulatory guidance (OSHA, HSE, EU, CCOHS, WHS, WorkSafe NZ, ILO)
- Consolidated remediation plan with recommended equipment
- Climate-smart guidance per finding
- Branded PDF export — reports available in English, French and Spanish
